

BearTrap Litepaper v1.0

BNB Chain Token Risk-Analysis Ecosystem Powered by \$BEARTRAP

Version: 1.0

Last updated: July 2026

Project: BearTrap

Token symbol: \$BEARTRAP

Blockchain: BNB Chain

Chain ID: 56

Contract address: 0xdd37bb28ae636f01f8e9953452bc82ee60524444

Official website: <https://beartrapcoin.xyz>

Official app: <https://app.beartrapcoin.xyz/>

Contact: support@beartrapcoin.xyz

1. Executive Summary

BearTrap is a BNB Chain project combining a community token with a live token risk-analysis ecosystem.

The project focuses on helping users review early warning signals around BNB Chain and Four.Meme tokens before making their own trading decisions. BearTrap provides a live web application, an X-based risk analysis agent, token discovery tools, holder-only utility features, and a growing roadmap focused on token safety, market awareness, and practical analytics.

\$BEARTRAP is the ecosystem token of BearTrap. It gives holders access to selected premium features inside the BearTrap app, including wallet-based holder verification and holder-only functionality.

BearTrap launched as a fair launch on Four.Meme and continues to build around transparency, community participation, and real product development.

2. The Problem

BNB Chain is one of the most active ecosystems for new tokens, community launches, and early-stage projects. Platforms such as Four.Meme allow new tokens to appear quickly, often attracting users before detailed information is available.

This creates a common problem: users often need to make decisions while information is fragmented across block explorers, social platforms, liquidity data, holder data, project pages, and community channels.

Important risk signals can be difficult to review quickly, including:

- creator behavior,
- holder concentration,
- launch structure,
- token progress,
- social presence,
- liquidity and trading activity,
- suspicious promotion patterns,
- missing or incomplete project information.

BearTrap was created to make this review process faster, clearer, and more accessible.

3. The BearTrap Solution

BearTrap provides tools that help users analyze token-related risk signals in one place.

The ecosystem currently includes:

- a live BearTrap Risk Analyzer App,
- token discovery and filtering tools,
- Four.Meme-focused token lists,
- risk signal summaries,
- an X-based BearTrap Agent,
- wallet connection,
- on-chain \$BEARTRAP holder verification,
- holder-only utility features,
- a roadmap for expanded analytics and premium tools.

BearTrap does not replace personal research and does not provide financial advice. Instead, it is designed to help users identify signals that may require closer attention.

4. BearTrap Risk Analyzer App

The BearTrap app is the main product of the ecosystem.

Official app address:

<https://app.beartrapcoin.xyz/>

The app allows users to explore and analyze BNB Chain and Four.Meme tokens through different discovery modes and filters.

Current app focus includes:

- token search by name or contract address,
- Four.Meme token discovery,
- standard token lists,
- Near Listing token discovery,
- Presale-related filtering,
- watchlist functionality,
- risk signal summaries,
- project metadata review,
- social and website presence checks,
- token holder-related signals,
- wallet connection,
- holder verification,
- holder-only features.

The app is designed to reduce friction for users who want to quickly review early-stage tokens and identify possible warning signs.

5. BearTrap X Agent

BearTrap also operates an X-based agent.

BearTrap Agent:

<https://x.com/BearTrapAgent>

The BearTrap Agent allows users to request token risk summaries directly on X.

A user can mention the agent together with a contract address, and the agent can respond with a risk-focused summary based on available token data.

This feature is designed to bring BearTrap's analysis closer to where many crypto discussions already happen: public conversations on X.

6. \$BEARTRAP Token Utility

\$BEARTRAP is the ecosystem token of BearTrap.

The token is used to support holder-based access inside the BearTrap app. Users can connect their wallet, verify their \$BEARTRAP balance on BNB Chain, and unlock selected premium functionality.

Current holder access requirement:

100,000 \$BEARTRAP

Current utility direction:

- wallet connection,
- on-chain holder verification,
- holder-only app features,
- premium discovery tools,
- expanded token analysis features,
- future holder-focused functionality.

BearTrap's goal is to connect the token directly with practical access inside the ecosystem, rather than relying only on speculative attention.

7. Token Information

Token name: BearTrap

Token symbol: \$BEARTRAP

Blockchain: BNB Chain

Chain ID: 56

Contract address: 0xdd37bb28ae636f01f8e9953452bc82ee60524444

Token standard: Fungible token on BSC Mainnet

Launch type: Fair launch on Four.Meme

Community takeover: No — BearTrap is not a CTO project.

BearTrap was launched on Four.Meme as a fair launch project and continues to be developed as an active ecosystem around token risk analysis and BNB Chain market tools.

8. Completed Milestones

BearTrap has already completed several key development and ecosystem milestones:

- fair launch on Four.Meme,

- official website launched,
 - BearTrap Risk Analyzer App launched,
 - BearTrap X Agent launched,
 - official Telegram community created,
 - official GitHub created,
 - BscScan token information submitted and accepted,
 - GeckoTerminal token information added,
 - public airdrop completed,
 - app moved to the official app.beartrapcoin.xyz domain,
 - wallet connection added,
 - on-chain \$BEARTRAP holder verification added,
 - first holder-only utility features launched,
 - updated app interface with independent discovery modes.
-

9. Roadmap

Current Focus

BearTrap is currently focused on strengthening its product, visibility, and ecosystem credibility.

Key current priorities include:

- CoinGecko listing submission,
- CoinMarketCap listing preparation,
- Binance DApp submission,
- continued app improvements,
- expanded holder-only features,
- improved token discovery experience,
- stronger risk signal presentation.

Upcoming Development Direction

Future development may include:

- expanded holder-only analytics,
- improved risk scoring,
- additional BNB Chain token discovery tools,
- deeper Four.Meme token insights,
- enhanced watchlist features,
- improved agent responses,
- more automation for token monitoring,
- additional community and partner integrations.

The roadmap is designed to remain practical and product-focused, with priority given to tools that improve user experience and token analysis quality.

10. Ecosystem Principles

BearTrap is built around several core principles.

Clarity

Token risk signals should be easier to understand.

Accessibility

Users should be able to review important token information without jumping across many tools.

Practical Utility

\$BEARTRAP should be connected to real app functionality.

Transparency

Project links, contract information, token data, and development progress should remain public and easy to verify.

Community Participation

BearTrap is supported by a community that follows the project's development, tests features, shares feedback, and helps expand awareness.

11. Disclaimer

BearTrap is an informational and analytical tool.

BearTrap does not provide financial, investment, trading, legal, or tax advice. Any risk summaries, token signals, filters, app results, or agent responses are provided for informational purposes only.

Users are responsible for their own research and decisions.

Crypto assets involve high risk, including the possible loss of funds. BearTrap cannot guarantee the safety, quality, performance, or future value of any token, including \$BEARTRAP.

13. Notes for Listing Platforms and Partners

BearTrap is a live product-oriented project on BNB Chain. The project combines a public community token with practical tools for token discovery, risk signal review, and holder-based app access.

The project is not a community takeover and should be listed under the official BearTrap name and \$BEARTRAP symbol.
